

Name: **ANSWERS!**

Class:

Topic 1-9 Classwork

Calculators OK

An economics course is comprised of a series of test grades.

On the first seven tests, a student scores:

60, 70, 80, 80, 80, 90, 100

On the eighth test, the student scores a 0.

What should be the student's current grade in the class? Explain your answer.

	Grade 1-7	Grade 1-8
If we use Mean	80	70
If we use Median	80	80
If we use the 1.5 IQR RULE for outliers, we delete the (0) and get	80	80

but is it fair to give no impact to a grade of Zero? Thoughts???
